(57) Abstract :
A LANGUAGE LEARNING SYSTEM WITH INTERACTIVE REAL-TIME FEEDBACK ABSTRACT The invention describes a novel social network-based open educational resource for learning foreign languages in real time from native speakers, based on the predefined teaching materials. This vir- tual learning platform, named i2istudy, eliminates misunderstanding by providing prepared and predefined scenarios, enabling the participants to understand each other and, as a consequence, to communicate freely. The system allows communication through the real time video and audio feed. In addition to establishing the communication, it tracks the student progress and allows rat- ing the instructor, based on the learner's experience. The system went live in April 2014, and had over six thousand active daily users, with over 40,000 total registered users. Currently monetiza- tion is being added to the system, and time will show how popular the system will become in the future.
