(57) Abstract :

[040] The present invention discloses an apparatus for allowing registration to network in wireless communication systems and method thereof. In the present invention, the wireless communication device is designed to address the needs of individuals and systems who frequently transition between different wireless networks and need to ensure seamless communication, without the loss of critical data such as undelivered user information. The device includes a wireless communication interface capable of using a variety of protocols including, but not limited to, Long Term Evolution (LTE), High Speed Packet Access (HSPA), Evolution Data Optimized (EV-DO), Global System for Mobile communications (GSM), Code Division Multiple Access (CDMA), Worldwide Interoperability for Microwave Access (WiMAX), and Wireless Fidelity (Wi-Fi). This wide-ranging compatibility allows the device to individually communicate with, and register on, a plurality of different wireless networks. Accompanied Drawing [FIGS. 1-2]
