(57) Abstract :

The proposed invention is an analytics interface for cyber threat detection and security management. It combines machine learning and artificial intelligence to identify patterns and anomalies within network data, enabling early threat detection and autonomous response. The system utilizes big data analytics to process and interpret large volumes of data in real-time. Advanced visualization techniques provide an accessible, user-friendly dashboard overview of the security status. The system includes a comprehensive risk management component for enhanced security measures and incident response capabilities for effective threat mitigation. This technology offers a proactive and comprehensive solution to cybersecurity in an era of sophisticated digital threats. Accompanied Drawing [FIGS. 1-2]
