Assessment:

1. SCADA systems gather data and send them to a central machine that processes the data. The SCADA software is used to manage the data and display it to the user.
2. SCADA also logs information about who runs reports and the data that is used..
3. SCADA also deals with big data, so you can develop a database system that displays trends over a number of years. This allows the business quick access to important data that can be used for future growth and enhancements.
4. SCADA allows users to create object-oriented graphs, they can offer trending graphs to review data in real-time.

Assessment:

1. MICROWIND is truly integrated EDA software encompassing IC designs from concept to completion, enabling chip designers to design beyond their imagination
2. MICROWIND integrates traditionally separated front-end and back-end chip design into one flow, accelerating the design cycle and reduces design complexities.
3. It tightly integrates mixed-signal implementation with digital implementation, circuit simulation, transistor-level extraction and verification – providing an innovative education initiative to help individuals to develop the skills needed for design positions in virtually every domain of IC industry.
