Assessment:

- Most design courses have very thorough structures and processes for assessment, which generally include documented learning outcomes and assessment criteria.
- However, lecturers and individuals marking assignments and involved in the external moderation of final
- portfolios, have, at one time or another, had queries relating to how work was assessed.
- Explaining to lay people how creative visual pieces are marked is often problematic.
- As lecturers operating in a learner-centred, outcomes-based higher education system, the
- description of what is expected of students and how they will be assessed should be intrinsic to assessment and transparent to all role players.
- Perhaps some of the responsibility for not being able to communicate our assessment approaches with us as design academics

Course Title	: 3D Modeling on Google Sketch up
Type of Course	: Value Added Course (VAC)
Academic Session / Semester	: 2021-2022/ Semester 1
Course Instructor	: Mrs. M SUMATHI, Assistant Professor,
Dates	: 08-10-21 to 17-10-21
Duration	: 36 Hours
Time	: 1 to 4 pm.
Course Code	: VAC/CIVIL/2021/001

Objectives:

1. To enhance the student's knowledge and skills in engineering drawing and to introduce drafting packages and commands for computer aided drawing and modeling.
2. The knowledge of projections of solids is essential in 3D modeling and animation. The student will be able to draw projections of solids. The objective is to enhance the skills they already acquired in their earlier course in drawing of projection.
3. The knowledge of sections of solids and development of surfaces is required in designing and manufacturing of the objects. Whenever two or more solids combine, a definite curve is seen at their intersection.
4. The intersection of solids also plays an important role in designing and manufacturing. The objective is to impart this knowledge through this topic. A perspective view provides a realistic 3D View of an object. The objective is to make the students learn the methods of Iso and Perspective views.
5. The objective is to introduce various commands in AutoCAD to draw the geometric entities and to create 2D and 3D wire frame models.
6. By going through this topic, the student will be able to understand the paper-space environment thoroughly.
7. The objective is to make the students create geometrical model of simple solids and machine parts and display the same as an Isometric, Orthographic or Perspective projection.

Outcomes:

1. Student get exposed on working of sheet metal with help of development of surfaces.

2. Student understands how to know the hidden details of machine components with the help of sections and interpenetrations of solids.
3. Student shall be exposed to modelling commands for generating 2D and 3D objects using computer aided drafting tools which are useful to create machine elements for computer aided analysis.

Syllabus

1. Projections of Regular Solids inclined to both planes – Auxiliary Views.
2. Sections and Sectional views of Right Regular Solids – Prism, Cylinder, Pyramid, Cone – Auxiliary views.
3. Development of Surfaces of Right Regular Solids – Prism, Cylinder, Pyramid, Cone and their parts.
4. Intersection of Cylinder Vs Cylinder, Cylinder Vs Prism, Cylinder Vs Cone, Prism Vs Cone.
5. Perspective View: Points, Lines, Plane Figures and Simple Solids,
6. Generation of points, lines, curves, polygons, dimensioning.
7. Types of modeling: object selection commands – edit, zoom, cross hatching, pattern filling, utility commands, 2D wire frame modeling, 3D wire frame modeling,
8. view point coordinates and view(s) displayed, examples to exercise different options like save, restore, delete, joint, single option.
9. Isometric projections, orthographic projections of isometric projections, Modeling of simple solids, Modeling of Machines & Machine Parts.
